EDUCATION

Dr. Akhilesh Das Gupta Institute of Technology & Management

New Delhi, India

B.Tech — Artificial Intelligence & Machine Learning (**CGPA: 8.5 / 10**)

Dec 2022 – May 2026

Coursework: Machine Learning, Deep Learning, Probability & Statistics, Linear Algebra, DBMS, Computer Networks, DSA

SKILLS SUMMARY

- **Languages:** Python, C++, JavaScript, HTML, CSS, SQL
- **Frameworks & Libraries:** PyTorch, TensorFlow, scikit-learn, Flask, FastAPI, OpenCV, MediaPipe, NumPy, Pandas, Plotly Dash
- **Tools:** Git, GitHub, VS Code, Jupyter Notebook, Google Colab, Postman, Gunicorn
- **Platforms:** Linux, Windows, Web
- **Core Areas:** Computer Vision, Neural Style Transfer, Pose Estimation, Face & Voice Recognition, Data Cleaning, REST APIs, DSA
- **Soft Skills:** Team Work, Problem Solving, Leadership, Communication
- **Courses:** Operating Systems, Data Structures & Algorithms, Machine Learning, Deep Learning, Databases, Networking

EXPERIENCE

Open Source Contributor - GirlScript Summer of Code (GSSoC)

(May 2026 – Present)

- Contributed to multiple open-source repositories under **GSSoC Extended 2025**, one of India's largest open-source programs run by GirlScript Foundation.
- Resolved GitHub issues across Python and ML-based projects — submitted **pull requests** for bug fixes, feature additions, and documentation improvements.
- Collaborated with maintainers and co-contributors in async remote environments, following contribution guidelines, code review cycles, and agile issue tracking.
- Earned **contributor badge** and points recognition for merged PRs, gaining practical experience in open-source workflows, Git branching, and collaborative development.

Data Science Intern - Guidona Softpedia Pvt. Ltd., On-site

(Sep 2025 – Dec 2025)

- Built and deployed interactive business dashboards using **Plotly Dash**, enabling real-time visualization of key operational metrics for stakeholders.
- Developed RESTful APIs using **FastAPI** to expose ML model outputs and data pipelines to front-end applications and internal tooling.
- Designed and optimized **SQL** queries for data extraction, transformation, and reporting across structured relational databases.
- Performed comprehensive **data cleaning and preprocessing** — handling missing values, outliers, and inconsistent data formats — to ensure data quality for downstream modelling.
- Collaborated with the engineering team to integrate data pipelines into production workflows, gaining exposure to end-to-end ML deployment.

Advanced Data Analytics Virtual Experience - Google (Forage), Virtual

(Apr 2025)

- Completed a data analytics simulation covering the full project lifecycle: problem framing, exploratory data analysis, model building, and stakeholder communication.
- Applied **Python** (Pandas, NumPy, Matplotlib) to clean, analyse, and visualise datasets, deriving actionable insights from raw business data.
- Built and evaluated a regression model for a business scenario, presenting findings with a clear data-driven narrative.

PROJECTS

Real-Time AI Gym Trainer | Stack: *Python, Flask, HTML, CSS, OpenCV, MediaPipe, Speech Recognition, ML*

- Built an end-to-end AI-powered personal trainer web app using real-time **face recognition** to identify users and deliver personalised workout plans.
- Integrated **voice recognition** for hands-free interaction — users receive spoken exercise cues, rep counts, and form corrections during workouts.
- Implemented computer vision pipelines using **OpenCV** and **MediaPipe** for pose estimation, tracking body keypoints to detect exercise repetitions and flag incorrect form in real time.
- Applied **ML classification** algorithms to auto-detect the current exercise being performed from live pose data, enabling adaptive training sessions.

Neural Style Transfer with AdaIN | Stack: *Python, Flask, PyTorch, TorchVision, Pillow, NumPy, Gunicorn*

- Developed a full-stack web application that applies artistic neural style transfer to any user-uploaded content image using **Adaptive Instance Normalisation (AdaIN)** — a fast, real-time alternative to iterative NST.
- Takes two inputs from the user: a **content image** and a **style/test image**; AdaIN aligns the feature statistics (mean & variance) of the content to the style image, producing high-quality stylised output in near real-time using a PyTorch (v2.2.2) encoder-decoder architecture.
- Designed a **Flask** (v3.1.2) web interface with WTForms and Flask-WTF for secure image upload; Pillow (v12.0.0) handles pre-processing, resizing, and result rendering.
- Deployed production-ready using **Gunicorn** as the WSGI server for stable concurrent request handling; full image lifecycle managed — upload, tensor transform, inference, download — in a clean MVC pattern.

CERTIFICATIONS & COURSES

- **AIML Prime Course** — Apna College (2025 — *In Progress*)
- **Python Bootcamp** — CodeWithHarry (2025)
- **The Complete Web Development Bootcamp** — Dr. Angela Yu (Udemy) (2024)
- **Data Science Course** — CodeWithHarry (2024)
- **Google Advanced Data Analytics Virtual Experience** — Forage (Apr 2025)
- **JPMorgan Chase Software Engineering Virtual Experience** — Forage (Jun 2025)

ACCOMPLISHMENTS

- **GSSoC Extended 2025** Contributor — earned recognition for merged pull requests across ML and Python open-source repositories.
- CGPA 8.5 / 10 — consistently ranked among top performers in the B.Tech AIML cohort at ADGIPS.
- Active competitive programmer on LeetCode and GeeksforGeeks — **Striver's A2Z DSA Sheet** (Ongoing).
- Participated in college-level tech fests, coding events, and seminars; engaged with departmental technical society.
